

The Burden of Psychological Co-Morbidity in Cutaneous Leishmaniasis

Dr Freddie Bailey, Epi Analyst, Public Health England

Professor David Molyneux, CMG, Liverpool School of Tropical Medicine

Background

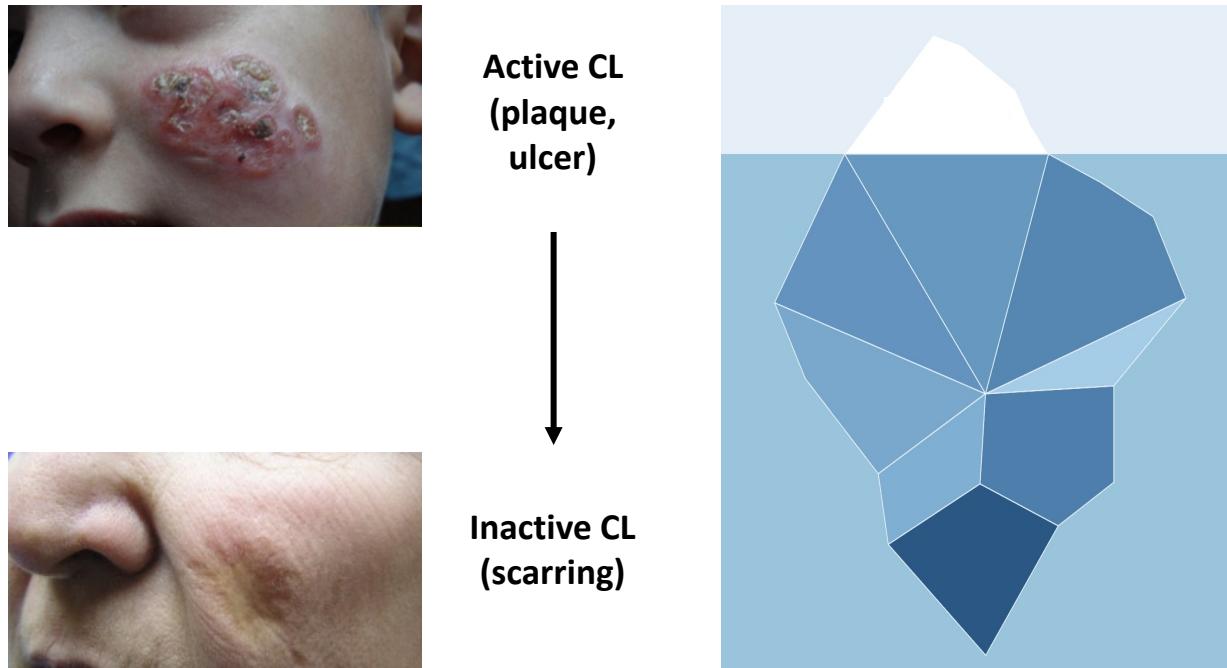

Table 1. Evidence Base for Mental Health and NTDs. Selected Holistic, Psychological, and Intervention Studies (as per InfoNTD, Medline, and Other Online Sources, October 2018)

NTD	Holistic (QoL; stigma; physical disability)	Psychological (Anxiety; depression)	Holistic/psychological intervention
Buruli ulcer	Ackumey M.M. <i>et al.</i> (2012) [2]; Klis S. <i>et al.</i> (2014) [21]	Kpadonou T.G. <i>et al.</i> (2013) [9]	Amoussouhoui A.S. <i>et al.</i> (2016) [44]
Chagas' disease	van't Noordende A.T. <i>et al.</i> (2016) [3]; Sousa G.R. <i>et al.</i> (2018) [62]	Ozaki Y <i>et al.</i> (2011) [63]	–
Chikungunya	Soumahoro M.-K. <i>et al.</i> (2010) [23]; Courtrier E. <i>et al.</i> (2012) [4]	–	–
Cutaneous and mucocutaneous leishmaniasis	Reithinger R. <i>et al.</i> (2005) [64]; Vares, B. <i>et al.</i> (2013) [65]; Al-Kamel M.A. (2017) [66]	Yanik M. <i>et al.</i> (2004) [12]; Simsek Z. <i>et al.</i> (2005) [14]; Torkashvand F. <i>et al.</i> (2016) [30]	Nilforoushzadeh M.A. <i>et al.</i> (2010) [38]
Dengue	Lum L.C. <i>et al.</i> (2008) [67]	Bhatia M.S. <i>et al.</i> (2017) [22]; Gurathilaka N. <i>et al.</i> (2018) [31]	–
Echinococcosis	Torgerson P.R. <i>et al.</i> (2001) [68]	–	–
Foodborne trematodiases	–	–	–
Guinea-worm disease	–	–	–
Human African trypanosomiasis	–	–	–
Leprosy	Tsutsumi A. <i>et al.</i> (2007) [13]; van Brakel W.H. <i>et al.</i> (2012) [69]; van't Noordende A.T. <i>et al.</i> (2016) [3]	Tsutsumi A. <i>et al.</i> (2007) [13]	Floyd-Richards M. <i>et al.</i> (2000) [39]; Semirittiroong S. <i>et al.</i> (2014) [42]; Peters R.M.H. <i>et al.</i> (2015) [46]; Lusli M. <i>et al.</i> (2016) [47]
Lymphatic filariasis	Perera M. <i>et al.</i> (2007) [70]; Abdulmalik J. <i>et al.</i> (2018) [71]	Obindo J. <i>et al.</i> (2017) [10]	–
Mycetoma	Balkhi S.M. <i>et al.</i> (2018) [5]	–	Bakhiet S.M. <i>et al.</i> (2018) [5]
Onchocerciasis	Hagan M. (1998) [72]; Okoye I.C. <i>et al.</i> (2007) [73]; Mbanefo E.C. <i>et al.</i> (2010) [74]	–	–
Podoconiosis	Mousley E. <i>et al.</i> (2013) [6]	Bartlett J. <i>et al.</i> (2016) [11]	–
Rabies	–	–	–
Scabies	Jin-gang A. <i>et al.</i> (2010) [20]	–	–
Schistosomiasis	van't Noordende A.T. <i>et al.</i> (2016) [3]; Fürst T. <i>et al.</i> (2012) [7]	–	–
Snake bite	Williams S.S. <i>et al.</i> (2011) [15]	Williams S.S. <i>et al.</i> (2011) [15]	Wijesinghe C.A. <i>et al.</i> (2015) [40]
Soil-transmitted helminths	Fürst T. <i>et al.</i> (2012) [7]	–	–
Taeniasis	–	–	–
Trachoma	Dhaliwal U. <i>et al.</i> (2006) [25]; Habtamu E. <i>et al.</i> (2015) [24]; Habtamu E. <i>et al.</i> (2016) [28]	–	–
Visceral leishmaniasis and Post-kala-azar dermal leishmaniasis	van't Noordende A.T. <i>et al.</i> (2016) [3]; Pal B. <i>et al.</i> (2017) [8]	–	–
Yaws	–	–	–

Cutaneous Leishmaniasis (CL)... AKA

- One of the most prevalent chronic NTDs
 - Several disease classifications – New World vs Old World; Anthroponotic vs Zoonotic, Diffuse vs Localised
 - However, none capture the lasting impact of permanent scarring

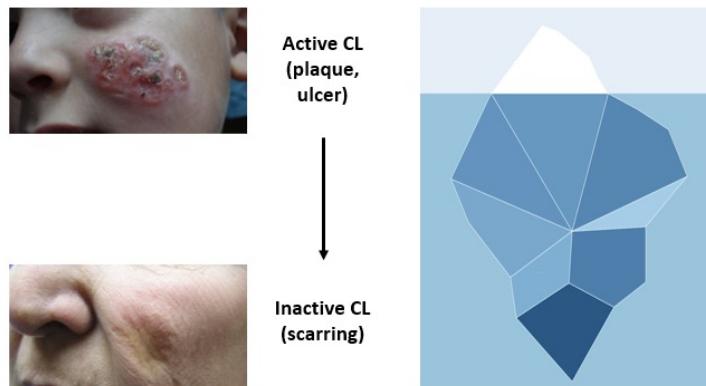

“The scar will remain forever”
(KSA) “Aleppo evil”
(Syria) “Trace”
(Yemen)
“Mountain leprosy”
(Amazonia)

Truer Prevalence of CL

- Based on figures, scarring (inactive CL) is also not included in prevalence estimates
- iCL (scarring) conservatively estimated based on life expectancy of 20 years and under-reporting factor of 6-10

	Active CL (GBD 2016) [18]	Inactive CL	Total
Ratio	~10	~90	100
Prevalence	4,320,000	33,883,900	38,203,900

Methodology

$$\text{DALY}_{(\text{MDD} \sim \text{CL})} = q * \text{DALY}_{(\text{CL})}$$

Or

$$\text{DALY}_{(\text{MDD} \sim \text{CL})} = \text{YLL}_{(\text{MDD} \sim \text{CL})} + \text{YLD}_{(\text{MDD} \sim \text{CL})}$$

YLL = Years of Life Lost due to a condition;

YLD = Years of Life Lived with Disability from a condition

$$\text{YLL}_{(\text{MDD} \sim \text{CL})} = N_{(\text{MDD} \sim \text{CL})} \times L_{(\text{MDD} \sim \text{CL})}$$

N = number of deaths;
L = standard life expectancy at age of death

$$\text{YLD}_{(\text{MDD} \sim \text{CL})} = P_{(\text{MDD} \sim \text{CL})} \times DW_{(\text{MDD})}$$

P = number of prevalent cases;
DW = disability weight

Disability Weights (GBD, 2019)

- Range from 0 (full health) to 1 (death)
- Based upon expert opinion
- Simplified (e.g. Same DW for “Disfigurement level 1” caused by diaphragmatic hernia, goiter, or Leprosy)

Mental Illness	DW
MDD (Depression)	
Mild	0.145
Moderate	0.396
Severe	0.658
GAD (Anxiety)	
Mild	0.03
Moderate	0.133
Severe	0.523

NTD	DW
CL	0.067
Leprosy	
Disfigurement level 1	0.011
Disfigurement level 2	0.067
Lymphatic Filariasis	
Acute adenolymphangitis	0.051
Hydrocoele	0.128
Lymphoedema	0.109

Other Physical Illness	DW
Severe atopic dermatitis	0.576
Symptomatic probable migraine	0.441
Medication-overuse headache	0.223
Very mild alcohol dependence	0.122
Moderate osteoarthritis (any joint)	0.071
Controlled asthma	0.015

Results

- Setting: 11/50 highest burden CL countries (*Karimkhani et al, 2016*)
- No significant difference in psychological impact between aCL and iCL
- Significant increase in MDD diagnosis and symptoms, QoL, and stigma in aCL and iCL vs control

Type of study	N	Finding
MDD diagnosis	4	~50% aCL and iCL
MDD symptoms	9	13-91% aCL; 27-59% iCL
QoL	11	Diminished in aCL and iCL vs controls
Stigma	11	>50% stigma in aCL and iCL
Qualitative	9	Wide-ranging lasting psychosocial impact of aCL and iCL
Total	29	

Staged Model of Depression

Stage	Definition	CL estimate
Wellness	Absence of any sustained, distressing, emotional experiences	30%
Distress	Mild to moderate distressing emotional experiences of relatively short duration	50%
Major Depressive Disorder	Severely distressing experiences, lasting at least two to four weeks, with impairment of social functioning	20%
Recurrent Major Depressive Disorder	Unresponsive or relapsing depressive episodes	

Estimates of mental health co-morbidity in CL

	Active CL⁺	Inactive CL	Total CL
Prevalence	4,320,000 [18]	33,883,900	38,203,900
Prevalence with MDD (%)	20%	20%	20%
Disability Weights (GBD 2016) [75]	0.145 (Mild MDD) 0.396 (Moderate MDD) 0.658 (Severe MDD)	0.145 (Mild MDD) 0.396 (Moderate MDD) 0.658 (Severe MDD)	0.145 (Mild MDD) 0.396 (Moderate MDD) 0.658 (Severe MDD)
YLDs (Co-morbid MDD alone)	208,932	1,687,065	1,895,997
YLLs (Co-morbid MDD alone)	0	0	0
DALYs (Co-morbid MDD alone)	208,932	1,687,065	1,895,997

Top 10 NTDs by YLD, GBD 2016

NTDs and Malaria	Prevalence	YLD
1 Intestinal nematode infections	1 507 853 000	2 946 000
2 Malaria	128 948 000	1 741 000
3 Schistosomiasis	189 774 000	1 496 000
4 LF	29 382 000	1 189 000
5 Dengue	6 046 000	982 000
6 Onchocerciasis	14 650 000	962 000
7 Cysticercosis	2 676 000	421 000
8 CL (aCL only)	4 320 000	273 000
9 Trachoma	3 338 000	245 000
10 Chagas disease	7 201 000	180 000

Top 10 NTDs by YLD, GBD 2016

	NTDs and Malaria	Prevalence	YLD
1	Intestinal nematode infections	1 507 853 000	2 946 000
2	Cutaneous leishmaniasis (aCL/iCL)	38 203 900	1 895 997
3	Malaria	128 948 000	1 741 000
4	Schistosomiasis	189 774 000	1 496 000
5	LF	29 382 000	1 189 000
6	Dengue	6 046 000	982 000
7	Onchocerciasis	14 650 000	962 000
8	Cysticercosis	2 676 000	421 000
9	Trachoma	3 338 000	245 000
10	Chagas disease	7 201 000	180 000

Final Thoughts

Table 1. Evidence Base for Mental Health and NTDs. Selected Holistic, Psychological, and Intervention Studies (as per InfoNTD, Medline, and Other Online Sources, October 2018)

NTD	Holistic (OoL; stigma; physical disability)	Psychological (Anxiety; depression)	Holistic/psychological intervention
Buruli ulcer	Ackumey M.M. et al. (2012) [2]; Klis S. et al. (2014) [21]	Kpadonou T.G. et al. (2013) [9]	Amoussouhoui A.S. et al. (2016) [44]
